

# **KICKER™ PROBIOTICS**

## **WHAT SETS The “KICKER” PROBIOTIC APART FROM ALL OF THE OTHER PROBIOTICS?**

- ◆ It is Microencapsulated which means that the microbes (friendly bacteria) are coated to prevent premature death of the microbes due to heat exposure, sunlight and humidity. The microbes are released by digestive enzymes when it reaches the intestinal tract.
- ◆ The Enzymes are organic substances that produce chemical changes. Enzymes initiate activity, are responsible for promoting the chemical reactions on which life depends, breaking down foods into usable products.
- ◆ Antibodies are a protein which reacts to overcome toxic effects, normally produced by the body's immune response system to fight disease. Antibodies build Immunity!
- ◆ The “KICKER” Probiotic because of the above are tolerant to the bodies Bile Salts which challenges the gut during periods of stress, the onset of a disease, improper feed or harmful environmental conditions.
- ◆ It is compatible with almost all antibiotics. If antibiotics have to be used, they kill all of the intestinal bacteria (both good & bad). The “KICKER” replenishes the good microbes and enzymes therefore consuming the bad bacteria. However, if the good microbes are already dead due to heat exposure they do not effectively work.
- ◆ The “KICKER” is not diluted with yeast! The microbials are grown in the laboratory and Microencapsulated (protected) so that they are ready to put your animal back in harmony with nature within 4 to 6 hours!

**THE KICKER™ IS AN IMPORTANT COMPONENT OF ALL WINNERS EDGE® PRODUCTS**

**KICKER™ PROBIOTICS are also available in the following forms:**

- ◆ 60 gram Tubes (Dial A Tube- 5 gm increments)
- ◆ 300 gram Tubes (Large economy size-administer w/ worming gun)
